

Homework #2

School ID: 202355517 Name: 권민규

Solutions from the following questions can be found out by googling. Write down your own solutions. If your solutions look like copying solutions available at the Internet, you will get zero point without any notification.

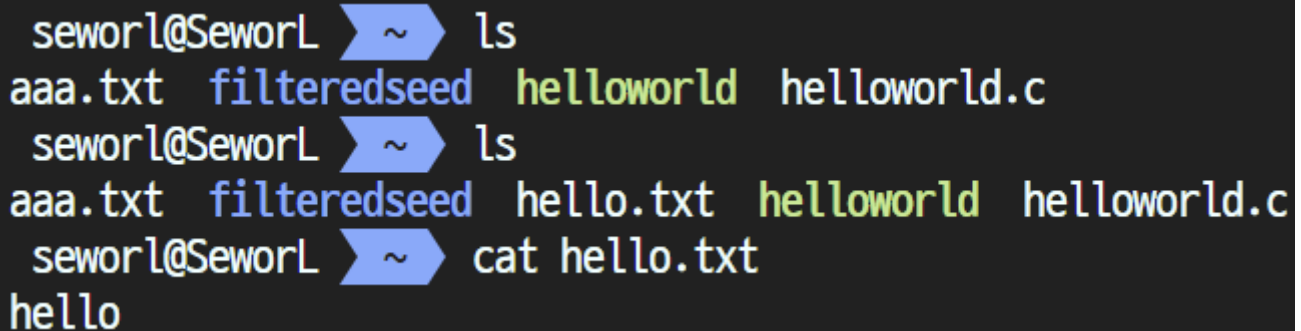

1

Your friend comes to you with an odd request. All she wants you to do is make a simple text file containing the word **hello**. She asks that you name the file **hello.txt**. How would you do this using vi? (Remember to save and quit.)

순서대로 입력해준다.

```
$ vi hello.txt # vi로 hello.txt 파일을 열고, 없으면 새로 생성하여 연다.  
i # 삽입 모드로 전환한다.  
hello # hello를 입력한다.  
<ESC> # 기본 모드로 돌아간다.  
:wq! # 명령모드를 실행한 뒤(:) 저장하고(w) 종료한다(q!).
```

실행 후 파일이 추가됨을 확인할 수 있다.

```
seworl@SeworL ~$ ls  
aaa.txt filteredseed helloworld helloworld.c  
seworl@SeworL ~$ ls  
aaa.txt filteredseed hello.txt helloworld helloworld.c  
seworl@SeworL ~$ cat hello.txt  
hello
```

2

Bad move. Now your friend knows you can use vi, and she wants you to make a longer text file named **dummy.txt** which contains the sentence "**vi is for dummies.**" one per line for 23 lines. What is the most efficient way to do this with vi?

순서대로 입력해준다.

```
$ vi dummy.txt # vi로 dummy.txt 파일을 열고, 없으면 새로 생성하여 연다.  
i # 삽입 모드로 전환한다.  
vi is for dummies. # vi is for dummies.를 입력한다.  
<ESC> # 기본 모드로 돌아간다.  
yy22p # 현재 줄을 복사(yy)하고, 22번(22) 붙여넣어(p) 총 23줄을 생성한다.  
:wq! # 명령모드를 실행한 뒤(:) 저장하고(w) 종료한다(q!).
```

실행 후 파일이 수정됨을 확인할 수 있다. (화면에 담기 위해 줄 수를 조금 줄였다.)

```
seworl@SeworL ~ ➤ cat dummy.txt
vi is for dummies.
vi is for dummies.
vi is for dummies.
vi is for dummies.
vi is for dummies.
vi is for dummies.
vi is for dummies.
vi is for dummies.
seworl@SeworL ~ ➤ cat dummy.txt
vi is for Smarties.
vi is for Smarties.
vi is for Smarties.
vi is for Smarties.
vi is for Smarties.
vi is for Smarties.
vi is for Smarties.
vi is for Smarties.
```

4

She's sulking because her own editor seems useless now. Unfortunately, you've wasted so much time showing off that you've forgotten you have a report to finish. You've also forgotten to wear your watch today, and you need to make this very important deadline. Quickly, how do you access the system's correct time via the UNIX date command without leaving vi?

```
:r!date # 현재 커서에(r) 시스템의 현재시간(date)을 받아 출력한다(!).
```

실행 후 현재 시간이 출력됨을 확인할 수 있다.

```
vi is for Smarties.  
vi is for Smarties.  
vi is for Smarties.  
vi is for Smarties.  
vi is for Smarties.  
vi is for Smarties.  
vi is for Smarties.  
Mon Mar 25 09:26:39 KST 2024
```

문서에 사용할 필요가 없는 경우 **dd** 등으로 다시 삭제하면 된다.

5

Your friend is making it hard for you to concentrate. At one point, you decide to move lines 20 through 30 inclusive to the point between line 1 and line 2, so you cut them out of the text by moving to line 20 and typing **11dd**. Before you can paste them to the desired location, however, your friend points out that you have an extra "the" in one of your lines, so you delete it with **dw** to shut her up. Oops. Now how do you recover those 11 lines you had previously cut and then paste them to the desired location at the top of your file?

```
:2u # 명령모드를 실행한 뒤(:) 2번째(2) 전 상태로 되돌린다(u).
```

그 뒤 **dw**를 먼저 실행한 후 **11dd**를 실행하는 등 순서를 조정하여 다시 진행하면 된다.

전후 비교

```
1 hello world!  
2 hello world!  
3 hello world!  
4 hello world!  
5 hello world!  
6 hello world!  
7 hello world!  
8 hello world!  
9 hello world!  
10 hello world!  
11 hello world!  
12 hello world!  
13 hello world!  
14 hello world!  
15 hello world!  
16 hello world!  
17 hello world!  
18 hello world!  
19 hello the world!  
20 this is for paste  
21 |this is for paste  
22 this is for paste  
23 this is for paste  
24 this is for paste  
25 this is for paste  
26 this is for paste  
27 this is for paste  
28 this is for paste  
29 this is for paste  
30 this is for paste
```

```
1 hello world!  
2 this is for paste  
3 this is for paste  
4 this is for paste  
5 this is for paste  
6 this is for paste  
7 this is for paste  
8 this is for paste

22 hello world!  
23 hello world!  
24 hello world!  
25 hello world!  
26 hello world!  
27 hello world!  
28 hello world!  
29 hello world!  
30 hello |world!
```

6

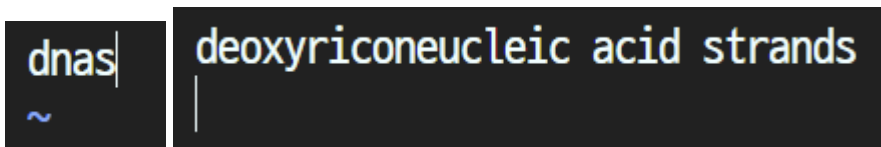

Your friend finally found something more fun than pestering you. Candy, While she is out looking for a vending machine, you notice that you have been repeatedly typing the phrase, "deoxyribonucleic acid" (without the quotes) because your mean instructor will not allow students to abbreviate. How would you

arrange it so that whenever you type the word "dnas" (without the quotes) in insert mode, it immediately expands to the correct phrase?

.exrc 파일을 생성하여 abbreviation을 추가한다.

```
$ vi ~/.exrc # vi로 .exrc 파일을 연다.
i # 삽입 모드로 전환한다.
ab dnas deoxyribonucleic acid strands # dnas를 입력하면 deoxyribonucleic acid
strands로 바꾼다.
<ESC> # 기본 모드로 돌아간다.
:wq! # 명령모드를 실행한 뒤(:) 저장하고(w) 종료한다(q!).
```

이후 vi에서 **dnas**를 입력하면 **deoxyribonucleic acid strands**로 바뀌는 것을 확인할 수 있다.

The image shows a terminal window with a dark background. On the left, the text 'dnas' is typed, followed by a blue tilde '~' indicating a continuation. On the right, the full expanded text 'deoxyribonucleic acid strands' is shown, with a vertical cursor line at the end.

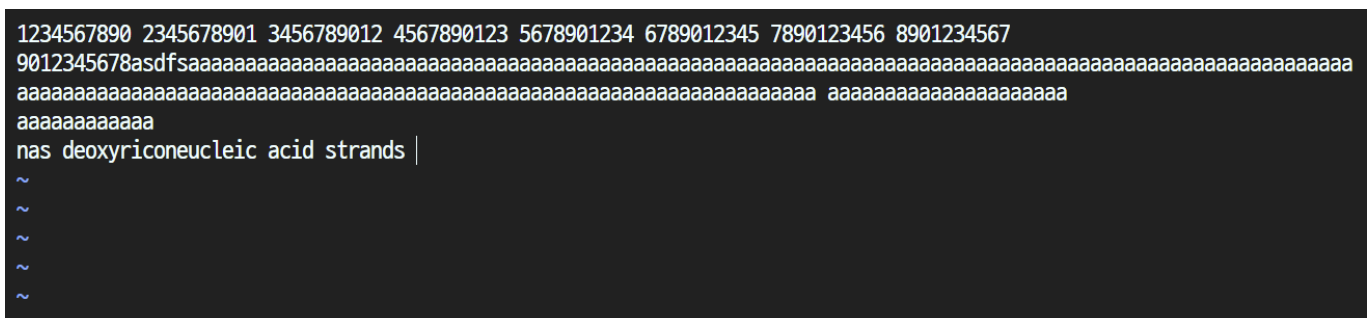

7

She's still out looking for candy. You are feeling better now that you don't have to keep typing that long phrase over and over again. But now you want the text to "wrap" for you whenever it goes beyond column 72, and you don't want to have to see it coming each time and manually hit Enter yourself. You also need to use the restroom, and you have to log out each time you leave this room. Quickly, how do you set vi to wrap the text for you and then make both this setting and your "dnas" macro from the previous question permanent?

.exrc 파일을 생성하여 설정을 추가한다.

```
$ vi ~/.exrc # vi로 .exrc 파일을 연다.
i # 삽입 모드로 전환한다.
set wm=72 # 텍스트가 72칸을 넘어가면 자동으로 줄바꿈한다.
ab dnas deoxyribonucleic acid strands # dnas를 입력하면 deoxyribonucleic acid
strands로 바꾼다.
<ESC> # 기본 모드로 돌아간다.
:wq! # 명령모드를 실행한 뒤(:) 저장하고(w) 종료한다(q!).
```

이후 vi에서 **dnas**를 입력하면 **deoxyribonucleic acid strands**로 바뀌고, 72칸을 넘어가면 자동으로 줄바꿈되는 것을 확인할 수 있다.

The image shows a terminal window with a dark background. The first line contains a long string of numbers: '1234567890 2345678901 3456789012 4567890123 5678901234 6789012345 7890123456 8901234567'. The second line starts with '9012345678' followed by a long string of 'a's. The third line continues the string of 'a's. The fourth line shows the text 'nas deoxyribonucleic acid strands' with a vertical cursor line at the end. Below this, there are several blue tilde '~' characters, indicating line wrapping.

공백을 기준으로 가로 72칸을 넘어가면 자동으로 줄바꿈되는 것을 확인할 수 있다.
